

MANAGED IPLC SERVICES

Navigate Communications (Navigate) offers customers comprehensive Managed IPLC Services powered by different submarine cables, with the option for single versus protected routes which allow customers to stay connected at all times. Our Managed IPLC Services are used by customers for dedicated connectivity services in mission-critical operations, including real-time data transfer of Voice, Video etc.

Leveraging on Navigate's extensive partnerships with various cable owners and global partners, customers can depend on us for their end-to-end business connectivity services.

WHY CHOOSE NAVIGATE FOR MANAGED IPLC SERVICES

- Build and deliver global connectivity services you need from our virtual network overlay architecture, as well as access pre-sales, sales, delivery, and post-sales support services.
- Highly available connectivity solutions with network resiliency and additional diversity options.
- A wide selection of connectivity options, with either protected or non-protected bandwidth, from 64K onwards.
- Single Point-of-Contact for service handling, fault reporting, management and billing.
- Availability of ultra-low latency networks.

OUR DIFFERENTIATION

- Being carrier-neutral, we provide customers with a choice of different global cable owners, helping them achieve a truly diverse, redundant cable path system.
- Managed end-to-end services on Navigate's virtual overlay platform eliminate the challenge of managing off-net locations.
- Bandwidth capacity is designed according to your business requirements, starting from 64kbps onwards.
- Extensive global reach into any destination worldwide.
- Choice of single or diverse routes to meet different business demands.
