

## SECURED INTERNET ACCESS SERVICE

Navigate Communications (Navigate) offers customers a cost-effective VPN solution to connect into the internet with its Secured Internet Access service. Through a Wide Area Network (WAN) setup, customers can create an Off-net/Backup solution over public infrastructure to enable their Private Network/MPLS services.

Our service allows customers to secure their data transmissions with high availability access technologies deployed along with Managed VPN solution delivered to their operations. Our service is designed to give customers end-to-end connectivity with VPN and CPE management, high customer satisfaction levels on their managed connectivity services, and trouble-free VPN services as well as other setups managed by Navigate.

### WHY CHOOSE NAVIGATE FOR SECURED INTERNET ACCESS SERVICE

- Managed VPN Solutions that allow customers to free up resources to focus on core business activities.
- Proactive support services for all secured Internet access.
- Access to 24x7 Network Operation Centre (NOC) services.
- Highly available and reliable services, delivering peace of mind to customers.

### OUR DIFFERENTIATION

- Our virtual network overlay architecture delivers true One-Stop-Shop (OSS) model for a professionally managed, end-to-end customer experience.
- Simplified vendor and SLA management with global coverage from Navigate.
- Coverage in more than 150 countries, coupled with value-added services.
- Lower investment cost with CPE and other management costs off-loaded to Navigate.
- Controlled Change Management processes for all secured Internet access services.
