

SECURITY SHIELD

Navigate Communications (Navigate) protects customers operating their businesses on the internet by mitigating security threats on the network level, protocol level and application level (Layer 3, 4 and 7).

Navigate Security Shield (NSS), leveraging on our purpose built Security Scrubbing Centers, protects you against smartly crafted and large scale volumetric security attacks. It is the only solution that eliminates security attacks before reaching your network.

WHY CHOOSE NAVIGATE FOR SECURITY SERVICES

- **Anti- DDoS**
Customers are protected from multi-vectored DDoS attacks with accurate real time detection systems.
- **Network IPS**
Our intrusion prevention systems provides the best security protection in the market.
- **Web Application Firewall**
Block attacks at network perimeter to ensure fast, reliable and secure delivery of mission-critical applications.
- **SSL Defense**
Mitigates SSL based encrypted flood attacks by authenticating suspicious sources prior to connection with the designated Web server.
- **Professional Experts**
Trained security professionals in our SOC team operating 24x7.

OUR DIFFERENTIATION

- Guaranteed no impact to legitimate traffic flow in your network during security attacks.
- Zero integration required due to our unique core network protection.
- Constant refresh to detect new threats, traffic anomalies, and behavioral patterns.
- Complete set of security modules from inline to cloud mode.
- Real time and non-intrusive network monitoring for secured protection.
- End to end protection against crafted applications and large volumetric attacks.
- Utilize latest technologies to combat new and emerging security threats.
